

Payroll-ready shift tracking for hospitality venues

Stop chasing timesheets. Start running your venue.

Clock in, export, done. Built by a bar manager after too many scraps of paper went missing and too many pay disputes. No spreadsheets, no paper, no month-end chaos.

✓ Custom pay rates

✓ One-click export

✓ Full audit trail

THE FIRST THING YOU SHOULD KNOW

"I built this after one too many nights hunting for a missing timesheet."

Constance

Bar Manager

I was managing the bar, closing out events, and then trying to rebuild hours from scraps of paper. People were tired. I was tired. Hours got argued about. Rates got argued about. I was fed up, so I built the thing I wanted at 11pm on a Saturday: clock in, clock out, clear records, payroll done.

FOR THE MANAGER DOING THREE JOBS AT ONCE

You are not "operations" in a neat little org chart.

You are on the floor, fixing rota gaps, answering staff questions, and then somehow expected to do payroll without missing a beat. This is for the person who says "I'll deal with it Monday" — and then spends Monday untangling chaos.

✗ No more scraps of paper vanishing on a busy night

✗ No more "whose shift was that?" on Monday morning

- ✗ No more rebuilding entire weekends from memory and messages
- ✗ No more manual rate calculations for day, night, enhanced and supervisor
- ✗ No more payroll guesswork when you can least afford it

THE BIT THAT FEELS TOO ACCURATE

A normal Saturday night, if you're still doing hours the old way.

This is not a fake problem statement. This is the exact kind of weekend that turns into a payroll nightmare.

11:07 PM **Wedding still going. Staff already asking what time they can leave.**
You say you'll sort hours later because the bar queue is six deep and someone's till is short.

12:18 AM **Someone writes their finish time on a napkin.**
"I clocked out, didn't I?" Nobody remembers whose clipboard had the sheet.

MON 8:12AM **Payroll starts with: whose shift was that?**
Now you're rebuilding a weekend from messages, photos, and memory while trying to open the venue.

Payroll should not start with "whose shift was that?"

WHAT YOU ACTUALLY BUY

Outcomes first. Features second.

You do not need another dashboard. You need fewer Sunday-night headaches.

OUTCOME

You close your laptop Friday knowing payroll is basically done.

HOW WE DO IT

Hours are already there, rates are already applied, and export is ready when you need it.

OUTCOME

Arguments about hours stop being a 40-minute conversation.

HOW WE DO IT

Every edit is visible. You can see who changed what and when, instead of playing detective.

OUTCOME

You stop carrying the whole system around in your head.

HOW WE DO IT

Staff log their own time. You approve, fix exceptions, and move on with your night.

HOW IT WORKS IN PRACTICE

What changes in the week after go-live.

1

Clock-ins that survive busy nights

Phone or tablet. Quick in, quick out. No paper sheet drifting around the venue.

2

Rates set once

Day, night, enhanced, supervisor. Set your real-world rates and let the app do the maths.

3

Fix the weird stuff fast

Missed clock-out? Wrong role? Edit in seconds without breaking the whole week.

MONDAY, BEFORE

- Message staff to find out hours
- Chase paper sheets around the venue
- Recalculate rates manually
- Hope nobody disputes it

MONDAY, AFTER

- ✓ Open portal
- ✓ Review exceptions
- ✓ Export
- ✓ Send payroll. Go do your actual job.

LAST ORDERS

Give yourself one less Sunday-night dread spiral.

Start using the portal before your next busy weekend, so Monday payroll is a quick admin job instead of a reconstruction project.
