

CONSTANCE BUILT THIS

“I built this after one too many nights hunting for a missing timesheet.”

I was managing the bar, closing out events, and then trying to rebuild hours from scraps of paper. People were tired. I was tired. Hours got argued about. Rates got argued about. I was fed up, so I built the thing I wanted at 11pm on a Saturday: clock in, clock out, clear records, payroll done.

**FOR THE MANAGER
DOING THREE JOBS AT
ONCE**

You are not “operations” in a neat little org chart. You are on the floor, fixing rota gaps, answering staff questions, and then somehow expected to do payroll who says, “I’ll deal with it without missing a beat Monday,” and then spends Monday untangling chaos.

- No more scraps of paper
- No more “whose shift was that?”
- No more rebuilding weekends from memory
- No more payroll guesswork

Set it up before this weekend

Built for real shifts, not demos.

Saturday-night pain

A normal Saturday night, if you're still doing hours the old way

This is not a fake problem statement. This is the exact kind of weekend that turns into a payroll nightmare.

11:07PM

Wedding still going. Staff already asking what time they can leave.

You say you'll sort hours later because the bar queue is six deep and someone's till is short.

12:18AM

Someone writes their finish time on a napkin.

Another person says, 'I clocked out, didn't I?' Nobody remembers whose clipboard had the sheet.

MONDAY 8:12AM

Payroll starts with: whose shift was that?

Now you are rebuilding a weekend from messages, photos, and memory while trying to open the venue.

Payroll should not start with “whose shift was that?”

Outcomes first. Features second.

You do not need another dashboard. You need fewer Sunday-night headaches.

OUTCOME

You close your laptop Friday knowing payroll is basically done.

How we do it

Hours are already there, rates are already applied, and export is ready when you need it.

OUTCOME

Arguments about hours stop being a 40-minute conversation.

How we do it

Every edit is visible. You can see who changed what and when, instead of playing detective.

OUTCOME

You stop carrying the whole system around in your head.

How we do it

Staff log their own time. You approve, fix exceptions, and move on with your night.

Outcome-first features keep admin light: clock-ins, rate maths, edits, audit trail, and exports when you need them.

What changes in the week after go-live

1

Clock-ins that survive busy nights

Phone or tablet. Quick in, quick out. No paper sheet drifting around the venue.

2

Rates set once

Day, night, enhanced, supervisor. Set your messy real-world rates and let the app do the maths.

3

Fix the weird stuff fast

Missed clock-out? Wrong role? Edit it in seconds without breaking the whole week's record.

MONDAY MORNING LOOKS DIFFERENT

BEFORE

Message staff. Check paper sheets. Recalculate rates. Hope nobody disputes it.

AFTER

Open portal. Review exceptions. Export. Send payroll. Go do your actual job.

BUILT BY SOMEONE WHO WAS DONE WITH TIMESHEET
CHAOS

“I built this after one too many nights hunting for a missing timesheet.”

I was managing the bar, closing out events, and then trying to rebuild hours from scraps of paper. People were tired. I was tired. Hours got argued about. Rates got argued about.

I was fed up, so I built the thing I wanted at 11pm on a Saturday: clock in, clock out, clear records, payroll done.
